Items procured under this contract contain Electro Explosive Devices (EED) and as such the supplier shall ensure that all reasonable and standardized explosive safety principles, methods, practices, requirements, and information are deployed.

The Department of Defense Contractor's Safety Manual for Ammunition and Explosives, 4145.26 shall be used to identify the minimum contractual safety requirements. These requirements do not constitute a complete safety program, and does not relieve the supplier from complying with Federal, State, Interstate, and local laws and regulations.

National Fire Protection Association Recommended Practice on Static Electricity, NFPA 77 shall also be used as a guideline to identify, assess, and control static electricity for the purposes of preventing fires and explosions.

All Electro- Explosive Devices shall be shipped with non FOD producing Faraday Caps installed, unless otherwise stated in the items design definition.
